\* The below clauses based on Hilti product qualifications are for references only. Selection of clauses by the engineer shall be based on the specific application needs. Please contact Hilti's technical team for further details.

- Push-in anchor which is placed into a drill hole and anchored by deformation controlled expansion, approved for use in un-cracked concrete.
- The anchor shall have European Technical Assessment (ETA); evaluating performance in un-cracked concrete
- Anchor shall be installed as per the manufacturer's approved procedure and equipment
- Anchor shall have corrosion resistance of min. 5µm galvanization
- Anchor shall be approved for installation using machine setting tools recommended by the manufacturer
- The recommended tension load of the anchor should not be not less than \_\_\_kN in cracked concrete with concrete strength at 25N/mm<sup>2</sup> (including overall global safety factor=3)
- Effective anchorage depth of the anchor should not exceed \_\_\_mm
- Anchor shall be approved for proper setting verification through visual inspection ("4 marks") when set with a manual tool or machine tool followed by manual tool recommended by the manufacturer

### Basic loading data (for a single anchor)

#### All data in this section applies to:

- Static and quasi-static loading
- Correct setting (See setting instruction)
- No edge distance and spacing influence
- Concrete as specified in the table
